

High Performance Streaming Audio Interface

The Music Streamer is a high performance music interface that allows a computer and a home entertainment system to become perfect partners. With its unique topology, the Music Streamer provides a completely isolated path between the computer and audio system. No more audio contamination by the computer; your music will always sound its best. There are no external power supplies to worry about because the Music Streamer derives its power from the USB buss while completely regenerating power for all its internal circuitry using a sophisticated set of proprietary circuits.

Operation is simple, just plug the Music Streamer into any USB port on your computer and the Music Streamer will install itself and be ready for use in a matter of moments. Connect the other end of the Music Streamer into any analog input and you are ready to stream high quality computer based music.

The Music Streamer provides full support for applications such as iTunes™ and Windows Media Player™ direct to your home entertainment system, with a level of quality never before possible. You can also use the Music Streamer to listen to internet radio or other music subscription services such as Rhapsody™ or Napster™ in high quality through your Home Entertainment System, Television or Stereo system.

High Resolution Technologies Music Streamer, the product for tomorrow, available today.

Specification	Music Streamer
<i>Electrical</i>	
Full Scale output	2.25 Volts RMS
Frequency Response (20 Hz/20 kHz)	-.3 dB / -1.8 dB
Noise Floor (DC to 30 kHz)	174 μ V RMS
Noise Floor (A-weighted)	110 μ V RMS
S/N Ratio (DC to 30 kHz)	82 dB
S/N Ratio (A-weighted)	86 dB
THD+N (1 kHz FS)	0.06%
USB to Audio output isolation	> 20M Ohm
<i>Interface</i>	
Data Rate	48 kS/s
Bit Depth	16 bit
USB type	1.1
Power Requirements (USB buss)	250 mA
Dimensions (L x W x H)	4.1" x 2.1" x 1.2"
