

Ultra High Performance Streaming Audio Interface

The Music Streamer + is a ultra high performance music interface that allows a computer and a home entertainment system to become perfect partners. With its unique topology, the Music Streamer+ provides a completely isolated path between the computer and audio system. No more audio contamination by the computer; your music will always sound its best. There are no external power supplies to worry about because the Music Streamer+ derives its power from the USB buss while completely regenerating power for all its internal circuitry using a sophisticated set of proprietary circuits.

Operation is simple, just plug the Music Streamer+ into any USB port on your computer and the Music Streamer+ will install itself and be ready for use in a matter of moments. Connect the other end of the Music Streamer+ into any analog input and you are ready to stream high quality computer based music.

The Music Streamer+ provides full support for applications such as iTunes™ and Windows Media Player™ direct to your home entertainment system, with a level of quality never before possible. You can also use the Music Streamer+ to listen to internet radio or other music subscription services such as Rhapsody™ or Napster™ in high quality through your Home Entertainment System, Television or Stereo system.

High Resolution Technologies Music Streamer+, the product for tomorrow, available today.

Specification

Music Streamer

Electrical

Full Scale output	2.25 Volts RMS
Frequency Response (20 Hz / 20 kHz)	0 dB / -1.7 dB
Noise Floor (DC to 30 kHz)	22 uV RMS
Noise Floor (A-weighted)	10 uV RMS
S/N Ratio (DC to 30 kHz)	100 dB
S/N Ratio (A-weighted)	107 dB
THD+N (1 kHz FS)	0.02%
USB to Audio output isolation	> 20M Ohm

Interface

Data Rate	48 kS/s
Bit Depth	16 bit
USB type	1.1
Power Requirements (USB buss)	250 mA
Dimensions (L x W x H)	5.1" x 2.1" x 1.2"
